Restoril (temazepam) is a benzodiazepine sedative prescribed for short-term sleep problems, typically requiring a prescription and careful medical supervision.

What is Restoril?

Restoril is the brand name for temazepam, a prescription medication used primarily for short-term treatment of insomnia. It belongs to the benzodiazepine class of drugs, which acts as a sedative to help users fall asleep and maintain sleep through the night. Restoril capsules come in several dosages—7.5 mg, 15 mg, 22.5 mg, and 30 mg—and should be taken only under a licensed healthcare provider's supervision due to risks of dependency and side effects.
