

Lunesta (eszopiclone) is a prescription sedative-hypnotic medication used to treat insomnia by helping patients fall asleep faster and maintain sleep throughout the night.

To buy Lunesta online ready to ship, you must:

- Obtain a prescription from a licensed healthcare provider after an evaluation of your sleep issues.
- Follow the recommended dosage, which generally starts at 1 mg taken immediately before bedtime with at least 7-8 hours available for sleep. The dose may be increased to 2 or 3 mg if clinically required, but should not exceed 3 mg daily.
- Be aware that elderly or debilitated patients, or those with severe liver impairment, should not take more than 2 mg.
- Use licensed, accredited pharmacies that require prescription verification before dispensing Lunesta and provide secure shipping.
- Understand the risks, such as complex sleep behaviors (sleepwalking, sleep-driving), next-day impairment, CNS depression, and the need to avoid alcohol or other sedatives while taking this medication.
- Follow the healthcare provider's guidance carefully and report any unusual behavior or side effects immediately.

Lunesta is a Schedule IV controlled substance due to its potential for dependence and abuse, so usage and refills are regulated by federal and state laws. It is intended for short-term or longer-term treatment of insomnia, but reevaluation of therapy should happen if insomnia persists beyond a few weeks.

In summary, to legally and safely buy Lunesta online ready to ship:

- Get a valid prescription from a licensed healthcare provider.
