What is Oxycontin?

Oxycontin is a prescription medication that is used to treat moderate to severe pain. It belongs to a class of drugs known as opioid analgesics, which work by binding to receptors in the brain and spinal cord to reduce the sensation of pain. Oxycontin is often prescribed to patients who require around-the-clock pain relief and cannot be managed with other medications.

Uses of Oxycontin

- Relief of moderate to severe pain
- Management of chronic pain conditions such as cancer-related pain
- Treatment of severe pain after surgery
