### Understanding Hydrocodone

**Hydrocodone** is a prescription opioid medication commonly used to relieve moderate to severe pain. It works by binding to specific receptors in the brain and spinal cord, altering how the body perceives pain. Hydrocodone is often prescribed after surgery, injury, or for chronic conditions where non-opioid treatments have not provided sufficient relief.

Because it is a controlled substance, Hydrocodone must always be used under the supervision of a licensed healthcare professional. Misuse or overuse can lead to dependence, making responsible use essential.

 *Expert Insight:* Always follow your doctor's prescribed dosage and never share your medication with others.
