## What Is Xanax (Alprazolam)?

Xanax is the brand name for **alprazolam**, a benzodiazepine prescribed for certain anxiety-related conditions. It works by enhancing the effects of GABA, a neurotransmitter that helps calm the nervous system.

### Common Medical Uses (As Prescribed)

- Generalized Anxiety Disorder (GAD)
- Panic Disorder (with or without agoraphobia)
- Short-term management of acute anxiety symptoms

Xanax is **not** intended for long-term unsupervised use due to the risk of dependence and withdrawal.
