### What Is Hydrocodone?

**Hydrocodone** is a **prescription opioid** used to relieve **moderate to severe pain**. It works by acting on the **central nervous system**, altering how your brain perceives pain.

Hydrocodone is commonly prescribed for:

- **Post-surgical pain**
- **Chronic pain management**
- **Acute injury-related pain**

It is available in several formulations and strengths:

- **Immediate Release (IR):** Provides fast-acting pain relief, lasting 4–6 hours.
  - **Extended Release (ER):** Slowly releases medication over 12 hours for long-lasting effect.
-
