

What Is Percocet? And How Buy It

'Percocet' is a potent pain reliever used to relieve moderate to moderately severe pain. It contains a combination of [oxycodone](#) (also called a pain analgesic) and acetaminophen.

[Oxycodone](#) is an opioid pain medication, whereas acetaminophen is less potent pain reliever that helps to increase the effects of oxycodone.

Due to its higher [risks of abuse](#), misuse, and addiction, which is even possible at recommended doses. Percocet is only prescribed when treatment with non-opioid medicines has not been tolerated.

It is advised not to share these medications with other people and not to sell them without an authorised licence.

What Are Percocets Side-Effects

If you use Alcohol during this medication, it can be dangerous, and can cause serious withdrawal symptoms, which can slow or stop your breathing.

Percocet interaction with other opioid and non-opioid medicines can cause severe withdrawal symptoms harmful to your health.

A very serious allergic reaction due to this drug can be seen rarely. However, take medical help right away if you experience any serious symptoms of allergic reactions, such as Itch, rashes, or swelling of the foot, ankle, or leg.

If you see or experience any signs of side effects, then get immediate medical help to prevent these symptoms –

- Nausea
- Vomiting
- Constipation
- Lightheadedness
- Dizziness
- Drowsiness

Some of Percocet's side effects may decrease if you have been using this medicine for a longer time.

Using Percocet during pregnancy can cause some side effects and could cause addiction to neonatal. Feeding mothers should also consult a doctor before taking this medication.

Suddenly, stopping the use of this medication without telling your physician can cause certain withdrawal symptoms. In this case, talk to your doctor, he might decrease your dose to prevent any symptoms of side effects, and then stop it.

Due to its higher risks of abuse, misuse, and addiction, please do not continue to use it for a more extended period of time. Otherwise, you will become addicted to it, and dependency may lead to severe withdrawal symptoms that are –

- Runny nose, watery eyes, and yawning
- Restlessness or anxiety
- Irritability or mood changes such as sadness and depression
- Increased pain
- Goosebumps on the skin, chills, or sweating
- Belly cramps
- Nausea, vomiting or diarrhoea
- Muscle cramping or aches and joint pain

How To Use Percocet

It is the most potent pain medication that is used to help provide relief from severe ongoing pain. This medication is only used when other non opioid medicines and even opioid medications fail to work or are inadequate.

You should not use Percocet if you have recently used Alcohol or any other opioid medications. Do not use Percocet if you have used any MAO inhibitor in the past 11 days.

You should not use this medication if you are allergic to its components, such as acetaminophen or oxycodone. And if you have severe asthma or breathing problems, or a blockage in your stomach or intestine.

If you use Percocet during pregnancy, your baby could become dependent on the drug. One should use this medication only after getting a physician or healthcare expert's recommendation.

The dose and use of this drug are different from person to person according to their health conditions.

Suppose you are dealing with any severe disease or breathing problem or have any history of breathing disorders. In that case, you should tell your doctor so that he can recommend doses that will not be harmful to your health.

What Is Percocet's Dosage

If you are taking this medication regularly and you forget to take a dose, take it as soon as you remember. But if it is close to the next dose, skip it and take the next dose at its regular time. Do not repeat or exceed the dose to catch up.

Doses vary from person to person according to age and health conditions. So follow the instructions and take your dose as prescribed by your healthcare professional.

Do not use Percocet for a prolonged period of time; you have to stop the medication when your doctors tell you to do so.

Children should not use these medications without having a proper consultation with a doctor. Otherwise, it can prove to be life-threatening or fatal to their health.

- For Moderate To Severe Pain – (capsule)

Adults should take one capsule every 6 hours as needed.

- Extended-release tablet form –

Adults should take two tablets every 12 hours as needed.

Oxycodone and acetaminophen can cause serious side effects and overdose that can be fatal to the health of children, pets, and adults who are not used to taking opioid pain medicines.

What Precautions Should I Take

Tell your doctor if you are dealing with these diseases or have any history of brain disorders (such as head injury, tumour, seizures), breathing problems (such as asthma, sleep apnea, chronic obstructive pulmonary disease – COPD), Kidney disease, liver disease, mental/mood disorder (such as confusion, hallucination).

Avoid using Alcohol or other liquid substances to prevent any interactions and withdrawal symptoms.

Do not use this medication if you are not used to taking opioid medications, and do not combine it with any other medicines. Otherwise, you will have to face symptoms caused by drug interaction.

Avoid eating grapefruits, and drinking grapefruit juice during this medication, and avoid it unless your doctor tells you to do so safely.

Overall

Percocet medicines are used only when other non-opioid medicines stop working and cannot be tolerated. Keep in mind that you should not use oxycodone without consulting a doctor or without having a proper prescription from an expert healthcare professional.

Do not get habitual to these medications as these are very addictive in nature, which is not suitable for one's health. If you find out that you are being dependent on this medication, then get immediate help from a doctor to prevent the addiction.

This drug may contain some inactive ingredients that can cause some allergic reactions, and other health problems.
