

Oxycodone For Sale

'Oxycodone' medicine is a potent semisynthetic opioid agonist prescription medication with agonistic properties. This drug is beneficial when used for the treatment of relieving pain and pain management judiciously.

It belongs to the group of medicines called Opioids (pain medicines). Oxycodone works on the part of the brain called the central nervous system (CNS) to relieve pain.

It is used when other opioid medicines have not worked or cannot be tolerated. Oxycodone works by blocking the pain signals present in the brain and provides immediate relief from the pain.

However, it carries the higher risks of inducing physical dependence and addiction to it. It is advised to take this medication by following the strict guidelines mentioned by your healthcare professionals in your prescription list.

- Seizures

Signs And Symptoms Of Oxycodone Overdose –

- Hypotension
- Bradycardia
- Respiratory Depression
- Miosis
- Somnolence
- Cold and clammy skin, and
- Death

How To Use Oxycodone

It is used in the treatment of acute, chronic, and severe pain and for pain management.

Oxycodone immediate-release tablets, capsules, and oral solutions are used to relieve severe or acute pain (pain that is occasional and will go away when the cause of the pain is healed).

This medication should be used as soon as the pain occurs, otherwise if the pain gets worse then it will be difficult to reduce the pain immediately.

You can take Oxycodone with or without food, but if it upsets your stomach, then you should take it with food. And if the problem persists then inform your doctor, he might change your dose, and give you a prescription that will be suitable for your health.

For best results and to get rapid recovery from pain, read your doctor's instructions or guidelines carefully and follow them unless your doctor tells you to stop the medication.

What Is Oxycodone Dosage

The dose of Oxycodone varies from person to person according to their physical conditions and health disease. The amount of dose that your doctor has prescribed to you depends on the strength of the medicine that you take in a day.

Do not increase or decrease the doses without informing your doctor, as it can prove to be life-threatening for your health.

Please do not continue to take your medications for a prolonged period of time, as it can make you addicted to them and can cause several dangerous withdrawal symptoms.

If you are taking Oxycodone for a more extended period, then do not stop it immediately, talk to your physician, he will gradually decrease your dose and then stop it, preventing any withdrawal symptoms that you may face.

Dose For Severe Pain –

For Adults – At first, take 9 mg every 12 hours with food. Your doctor may adjust your dose later. The dose may not exceed more than 288 mg in a day.

For Children – Use and dose of Oxycodone must be prescribed by a doctor.

For Moderate To Severe Pain –

For Adults – At first, take 5 – 15 mg every 4 – 6 hours in a day. Your doctor may adjust your dose later. If it is in tablet form, then an individual should take one tablet every 12 hours.

For Children – This medication should be given after a consultation with a doctor.

What Precautions Should I Take

- Avoid using alcohol while using oxycodone, as it is poisonous to your health and can cause severe withdrawal symptoms.
- Do not combine Oxycodone with any substance, drugs, or medicines that can cause drowsiness. Otherwise, it can cause severe health problems.
- Ask your doctor about the advantages, risks, and misuse of Oxycodone so that you can use it as per your health needs.
- Do not sell or share your medications with others, as it can be harmful to use them without consulting a doctor.
- Do not exceed or decrease the dose of your medications unless your doctor has told you to do so.

Overall

These medications are used only when other non-opioid medicines stop working and cannot be tolerated. Keep in mind that you should not use oxycodone without consulting a doctor or without having a proper prescription from an expert healthcare professional.

Do not get habitual to these medications as these are very addictive in nature, which is not good for one's health. If you find out that you are being dependent on this medication, then get immediate help from a doctor to prevent the addiction.
